

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

910

1. (Currently Amended) A method for repairing an injured intervertebral disc of a patient using a cultured connective tissue construct, comprising:

- (a) forming at least one opening in the annulus fibrosis of the intervertebral disc;
- (b) removing at least a portion of the nucleus pulposus through the opening in the annulus fibrosis; and
- (c) grafting a cultured connective tissue construct ~~[[into]]~~to close the opening in the annular fibrosis,

wherein the connective tissue construct is bioremodelable and integrates with host tissue to close the opening with new tissue.

2. (Currently Amended) The method of claim 1, wherein the cultured connective tissue construct comprises ~~[[an]]~~ extracellular matrix protein and fibroblasts.

3. (Original) The method of claim 2, wherein the extracellular matrix protein is collagen.

4. (Original) The method of claim 1, wherein the cultured connective tissue construct is a contracted collagen lattice containing fibroblasts.

5. (Original) The method of claim 1, wherein the cultured connective tissue construct is a layer of extracellular matrix which is synthesized and assembled by the cultured fibroblast cells, with the cultured fibroblast cells contained within the synthesized extracellular matrix layer and said matrix is produced by the cultured fibroblast cells in the absence of

exogenous matrix components or synthetic members during the culturing conditions.

6. (Currently Amended) A cultured connective tissue construct for use in surgical repair[[,]] of an intervertebral disc comprising; cultured fibroblasts in a collagen matrix.

7. (New) The method of claim 1, wherein the cultured connective tissue construct is grafted into the opening in the annular fibrosis.
